

HE&M[®] SAW

— The saw that cuts straight. —

Why Do We Make It In America?

All HE&M Saws are manufactured in the U.S.A., at our headquarters in Pryor, Oklahoma.

Why? We believe we have the best supported band saws on the market today, because we build them in the U.S.A. As an American-based manufacturer, we have an advantage over our competition, especially when it comes to parts and support service.

We use high quality standard components in the manufacturing of our saws, enabling you to find most parts “off the shelf” at local supply houses. With foreign manufacturers, you need to get these parts shipped from the manufacturer, and most times this process can take weeks. Because we stock almost \$3MM in parts for our saws, we can ship almost every part for every saw we have ever produced next day. Ask our overseas competitors if they can back their saws like this. Chances are they built their saws on a “5 year then obsolete” system in order to produce more saws over time. We build our saws to last over time and this philosophy differentiates us from our competitors.

HE&M Saw also has the largest Service Department with technicians who know the metal cutting industry to service your saws. Our Service Technicians are conveniently located across the U.S.A. to complete all required repairs and preventive maintenance in a timely manner.

It's Good for America:

We could have farmed it out to Korea, China, or somewhere else; but we've always thought it was the right idea to keep American dollars in America, and American jobs at home. Not only that, but we believe that American workers provide the highest quality products in the world. No other workers in the world work harder, produce more, or take more pride in their efforts than the American worker. HE&M Saw takes pride in helping to keep Americans at work, doing what they do best.
